EMS Drug Module

The EMS Drug Module organizes all of your meds in a small compact filing system that securely fits within a TS-Ready™ module pack. Clear internal pouches provide quick identification of meds. Additional clear pockets provide storage for needles and syringes. Add this module to the #14030 Trauma bag or the #12021 O2 Response or simply use it individually as a shoulder bag or carry-tote style. All sides of the bag that touch the ground are reinforced with TPE to ensure durability and to resist water. Optional shoulder strap is sold separately.

View the total system in action here.

- 1) Compact and lightweight
